Bitcoins

I ärendet har det identifierats ett antal så kallade wallets eller plånböcker som används för att handla med Bitcoins (BTC). En plånbok kan vem som helst skapa på internet. En plånbok kan ha olika antal adresser kopplade till sig. En adress är en sträng med mellan 30-35 bokstäver och siffror i olika kombinationer. Varje adress är unik. För att göra en transaktion till någon annan behövs en adress till mottagaren. Flera transaktioner kan ske via samma adress. Alla bitcointransaktioner som sker är publika och kan följas på olika internetsidor.

Uppställningen nedan utgår från Bilaga 1 samt beslag. Där redovisas adresser som köpare fått via Cannalounge mailkontot. Dessa adresser kan kopplas till olika plånböcker via www.walletexplorer.com. Samma plånböcker har i flera fall hittats i form av transaktionshistorik i excelfiler på de beslagtagna USBna (G-16-12 p26-27).
