1 Inledning

1.1 Syfte

Syftet med detta dokument är att förse NFCs uppdragsgivare med information om applikationen Signal.

1.2 Avgränsning

Funktionaliteten som beskrivs i detta dokument är testad med versionerna 5.49.0.13 (iOS) och 5.46.6 (Android).

2 Analys

2.1 Generellt om Signal

Signal är en kommunikationsapplikation som utvecklas av den ideella stiftelsen Signal Foundation [1]. Applikationen använder krypterad end-to-end kommunikation vilket betyder att informationen som skickas endast är läsbar på de enheter som kommunikationen sker mellan.

Bild 1 Logotyp

2.2 Användarkonto

Konton baseras på telefonnummer. Det räcker med att känna till en annans användares nummer för att kunna skicka meddelande. Vid registrering anger användaren ett valfritt användarnamn (kan ändras senare) samt ett telefonnummer. En sexsiffrig kod skickas via SMS till det angivna telefonnumret. Koden anges sedan i applikationen vilket slutför registreringen. Telefonnumret behöver inte nödvändigtvis vara aktivt på den telefon där registreringen sker. Exempel: Kontoregistrering görs på en telefon med telefonnummer 123456789 men telefonnummer 987654321 anges som mottagare för den sexsiffriga koden. När användaren kommunicerar med andra kommer 987654321 visas som användarens nummer.

Sedan början av februari 2022 är det möjligt att byta ut telefonnumret som är kopplat till ett konto och samtidigt behålla konversationshistorik samt kontakter. Deltagare i aktiva konversationer får en notis om att motparten har ändrat telefonnummer.

2.2.1 Länkade enheter

Ett konto kan skapas under Android, iOS och iPadOS. Kontot kan bara vara aktivt på en mobilenhet i taget [2]. För användning av Signal på en dator (Windows, MacOS, Linux) behöver man först skapa ett konto med en mobiltelefon och sedan länka kontot till applikationen på datorn. Genom att länka kontot går det alltså att använda samma konto på flera enheter samtidigt.

2.3 Text-, ljud- och videosamtal

Applikationen stöder text-, ljud- och videosamtal (inklusive gruppchatt). Det går även att spela in och skicka röstmeddelanden samt bifoga olika typer av filer.

2.3.1 Försvinnande meddelanden

I varje konversation går det att ställa in hur länge (upp till fyra veckor alternativt ingen gräns) meddelanden ska finnas kvar innan de raderas. Timern startar först när meddelandet har lästs, meddelandet kan därför finnas kvar hos mottagaren även om det raderats på sändarens telefon.

2.3.2 Radera meddelande för samtliga parter

Meddelanden som inte är äldre än tre timmar kan tas bort från samtliga enheter. Samtliga parter noteras om att meddelandet tagits bort.

2.4 Chatterfönster

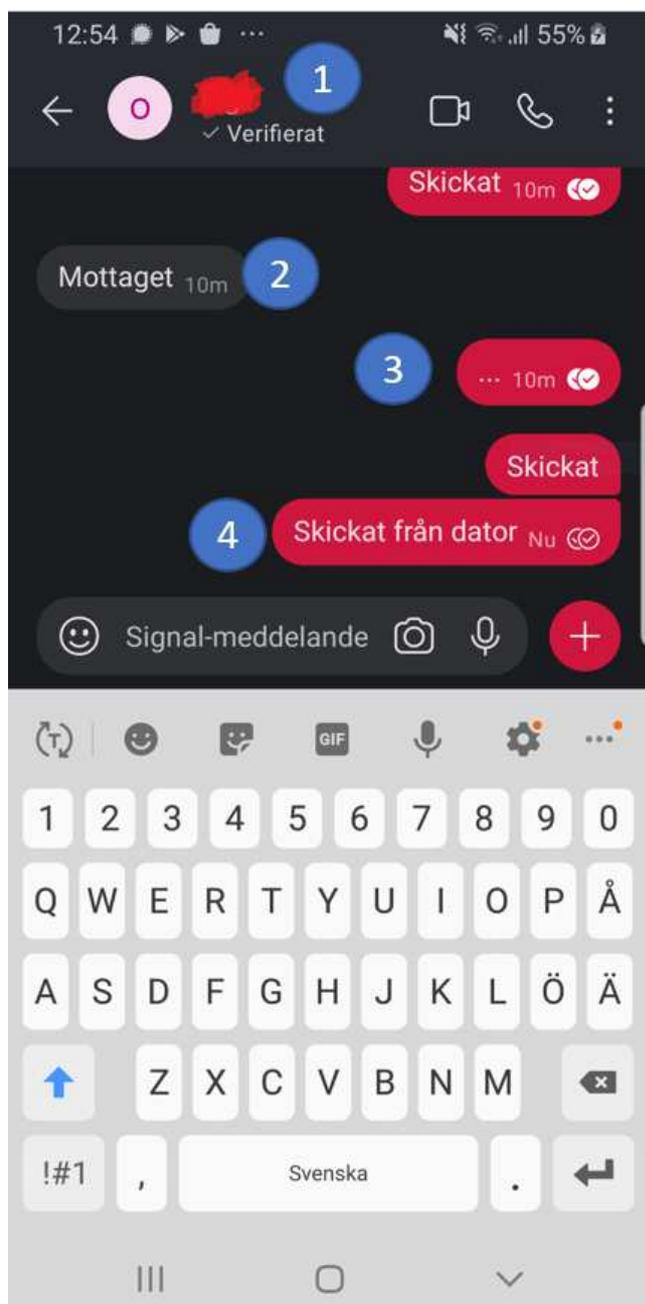

Bild 2 Chatterfönster (Android)

Tabell 1 Förklaring av Bild 2

1	Motpart (i gruppchatt visas gruppnamnet)
2	Mottaget meddelande
3	Skickat meddelande. Statusindikatorn (två bockar inuti två vita cirklar) visar att meddelandet har lästs.
4	Skickat meddelande från länkad enhet (dator). Statusindikatorn (två bockar inuti två transparenta cirklar) visar att meddelandet är levererat. Statusen gäller även meddelandet ovanför.

2.5 Övrigt

2.5.1 Applikationslås

Det är möjligt att begränsa åtkomst till applikationen med ett skärmlås. På iOS används t.ex. Face ID och på Android lösenkod eller fingeravtryck.

2.5.2 Registreringslås

Kontot kan låsas med en pinkod så att telefonnumret inte kan omregistreras under sju dagar på en ny telefon såvida man inte har koden [3].

2.5.3 Teman

Utseendet på applikationen kan ändras. Det går att välja mellan ljust och mörkt tema samt olika accentfärger.
